-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Information Disclosure Statement

1. Document #13 listed on the IDS form submitted 6/19/03 is not present in the application; hence, has not been considered. Please resubmit said document.

Drawings

2. The drawings are objected to because a portion of figure 2 is not shown (the bottom part of figure 2 is cut off). Corrected drawing sheets are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Hadano et al.

Re: claim 1, Hadano shows a vibration isolating bushing, as in the present invention, comprising: a main shaft member 1, 5 including a tubular portion 1, a flange portion 5 extending radially outwardly from one end of the tubular portion, and a block portion 11 provided on a central portion of the tubular portion and distanced from the flange portion an axial direction of the main shaft member; an outer cylinder member 3 disposed coaxially on an outer side of the main shaft member distance therefrom; and a rubber elastic body 2 disposed between the main shaft member and the outer cylinder member integral connection of the main shaft member and the outer cylinder member, rubber elastic body including a hollow portion 22 which is open in an end face away from the flange portion and extends in the axial direction up to the vicinity of an end face on a side the flange portion; wherein the rubber elastic body further includes non-deforming rubber portion, please see the figure below, and a connecting portion, see the figure below; the non-deforming rubber portion is positioned between the flange portion and the block portion and is substantially undeformable with respect to an

application of an axial load; the connecting portion is positioned between a bottom the hollow portion and the end face of the rubber elastic body on the side of the flange portion, for connecting the non-deforming rubber portion and an inner peripheral surface of an end portion of the outer cylinder member.

Fig. 4a

Re: claim 2, Hadano shows the block portion 11's radially outwardly protruding end face as claimed.

Re: claim 3, Hadano further shows the connecting portion to be offset inwardly compared to the non-deforming portion.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ikeda et al. show another similar bushing.
